

CSC493 – Weekly Reports

Your name: Jakob Bister

Week: 4

Part 1: Weekly Progress Report

- **Accomplishments:** What did you accomplish since the last class meeting?

Started working on code in angular creating a front end for my web application, this was one of my previous goals from last week.
Completely up to date on required documents on github, this was another of my future goals from last weeks report.

- **Challenges:** What are your current roadblocks?

Getting the angular cli set up and all the necessary software downloaded to use it. I have tried looking up the problems I had in google and looking at youtube videos and have made some progress but it is not fully functional.

- **Desired Discussion Points:** Do you have any desired discussion points that are not related to roadblocks?

Does anyone have experience with the angular setup process?
Is figma a good way to design your website fast or is it not really a good use of time?

- **Future Goal:** What do you plan to accomplish before our next class meeting? These plans should be related to roadblocks or discussion points. If you plan to change direction, explain why.

Completely finish the angular setup, and start getting results on front end design.

Part 2: Time Reporting

Make sure that as you fill out the first prompt, you include in enough detail in the summary. For example, "debugging" is vague, but "debugged function X to make sure that when user does action Y, it is called and returns the value Z" is better.

- **Time Spent:** Briefly explain how much time you spent on your project. If you worked on multiple components, each should get a detailed summary.

1 hour on my required documents (design.md and README.md)
2 hours on Angular research (benefits of this frame work over others + setup + documentation)

- **Weekly Total Time Spent:** Make sure to add up all the hours and minutes correctly.

3 hours

- **Total Project Time Spent:** After the number of hours and minutes, make sure to briefly explain whether you are on track and if not, what you may need to do in order to achieve what you set out to accomplish.

4 hour and 40 minutes

Still feel behind need to get started on code in the next week and hopefully work out a whole basic front end if possible.

Rubric:

The following rubric will be used, but they might change as needed.

Accomplishments (3 points)

1 point for a general description of progress, 2 points for specifics on progress, 3 points for specifics AND referring to previous targets and explaining how currently accomplishments build on previous ones.

Challenges (3 points)

1 point for mentioning there are roadblocks, 2 points for specifics, 3 points for specifics AND what was done already to try to overcome them.

Desired discussion points (2 points)

1 point for at least one relevant discussion point as a general question, 2 points for relevant discussion points with specifics

Future Goals (2 points)

1 point for concrete future targets (i.e. "working more on the project" is a zero, but "working on getting component X to interface with component Y" suffices), 2 points for tying in the targets with what was hopefully discussed in the meeting.

Time Spent (3 points)

1 point for including general statements of how much time was spent ("4 hours on coding"), 2 points for splitting time into specific parts ("1.5 hours on research on component X, 1 hour coding, 2.5 hours debugging"), 3 points for specific parts and details on the pieces ("1.5 hours researching Turtle interface for drawing concentric circles given inputs from the user, 1 hour coding function X that used that interface, 2.5 hours testing function X by giving it multiple values and fixing errors for values A, B, C, and D")

Weekly Total Time (1 point)

Total Project Time (2 points)

1 point for summing the values correctly, 2 points for the total time AND reflection on progress (you are confident to fit the target and if not, what course corrections you anticipate needing to make)
