

CSC493 – Weekly Reports

Your name: Jakob Bister

Week: 6

Part 1: Weekly Progress Report

- **Accomplishments:** What did you accomplish since the last class meeting?

Figured out how to do the API call automatically instead of manually through the browser, this satisfies a future goal of last week.
Looked through stockfish documentation, this starts the process of last weeks future goal of using stockfish to find weaknesses in games.

- **Challenges:** What are your current roadblocks?

Time management, especially trying to find time where I am not distracted by other things, I have tried working with other people, working alone, working in public places (library/coffee shop), working in private.

- **Desired Discussion Points:** Do you have any desired discussion points that are not related to roadblocks?

How do people feel there project is going and do they feel that they are on track or behind?

- **Future Goal:** What do you plan to accomplish before our next class meeting? These plans should be related to roadblocks or discussion points. If you plan to change direction, explain why.

Finish making the code that detects weaknesses in chess games using stockfish.

Part 2: Time Reporting

Make sure that as you fill out the first prompt, you include in enough detail in the summary. For example, "debugging" is vague, but "debugged function X to make sure that when user does action Y, it is called and returns the value Z" is better.

- **Time Spent:** Briefly explain how much time you spent on your project. If you worked on multiple components, each should get a detailed summary.

1 hour working on API call, finished.
2 hour looking through stockfish documentation.

- **Weekly Total Time Spent:** Make sure to add up all the hours and minutes correctly.

3 hours

- **Total Project Time Spent:** After the number of hours and minutes, make sure to briefly explain whether you are on track and if not, what you may need to do in order to achieve what you set out to accomplish.

11 hours and 40 minutes

I feel decent about my project, I was hoping to get more done this week than I did.

Rubric:

The following rubric will be used, but they might change as needed.

Accomplishments (3 points)

1 point for a general description of progress, 2 points for specifics on progress, 3 points for specifics AND referring to previous targets and explaining how currently accomplishments build on previous ones.

Challenges (3 points)

1 point for mentioning there are roadblocks, 2 points for specifics, 3 points for specifics AND what was done already to try to overcome them.

Desired discussion points (2 points)

1 point for at least one relevant discussion point as a general question, 2 points for relevant discussion points with specifics

Future Goals (2 points)

1 point for concrete future targets (i.e. "working more on the project" is a zero, but "working on getting component X to interface with component Y" suffices), 2 points for tying in the targets with what was hopefully discussed in the meeting.

Time Spent (3 points)

1 point for including general statements of how much time was spent ("4 hours on coding"), 2 points for splitting time into specific parts ("1.5 hours on research on component X, 1 hour coding, 2.5 hours debugging"), 3 points for specific parts and details on the pieces ("1.5 hours researching Turtle interface for drawing concentric circles given inputs from the user, 1 hour coding function X that used that interface, 2.5 hours testing function X by giving it multiple values and fixing errors for values A, B, C, and D")

Weekly Total Time (1 point)

Total Project Time (2 points)

1 point for summing the values correctly, 2 points for the total time AND reflection on progress (you are confident to fit the target and if not, what course corrections you anticipate needing to make)
